

Software Engineer with 2+ years of experience building scalable web applications and APIs and specializing in modern JavaScript frameworks like React and Node.js. Skilled in collaborating with cross-functional teams to design meaningful solutions. Proficient in the use of backend languages such as Go and Python. Passionate about creating impactful software that supports innovative products and drives meaningful results.

## EMPLOYMENT & VOLUNTEER EXPERIENCE

---

### Buffalo Field Campaign

*Frontend Developer | September 2024 – January 2025*

- Leverage Google Analytics data to drive SEO improvements and streamline website navigation, optimizing content structure and implementing accessibility best practices to boost traffic and user retention.
- Collaborate with board members to develop and implement new visual elements, resulting in improved website aesthetics and a more engaging user experience.
- Provide security recommendations, including CRM updates, to strengthen site defenses, address vulnerabilities, and protect sensitive data.
- Remove redundant links and information, simplify access to key information, and increase user satisfaction to enhance the overall user experience.

### Staples

*Print Specialist | February 2025 – Present*

- Manage multiple print orders efficiently, ensuring all projects are completed accurately and on time.
- Deliver high-quality print solutions by consulting with customers to understand their needs and recommend the best options.

*Sales Associate | February 2023 – March 2025*

- Utilized exceptional communication skills to ensure easy customer checkout and returns, resulting in a 20% increase in customer conversion rate and high satisfaction levels.
- Use customer service skills to help the store achieve a 90% customer satisfaction rate based on survey responses, positively impacting business performance.

### Chingu

*Frontend Developer | May 2023 – July 2023*

- Led the development of BooleBots, a multiplayer Boolean logic-based game, collaborating with a distributed team to deliver a functional and engaging product.
- Designed and implemented gameplay mechanics using React and ChakraUI to create an entertaining and educational game.
- Coordinated code reviews, task management, and progress tracking in a remote team environment, simulating a professional Agile workflow.
- Delivered a [fully functional game](#) within the project timeline, highlighting effective teamwork and technical skills in front-end development.
